

7 Valuable Reasons Why CircuitSolver® Is More Effective Balancing Domestic Hot Water Systems

1) So much simpler

It automatically balances the domestic hot water system with no external power or manual adjustment required.

2) Reduces installation and maintenance costs

Eliminates time consuming and expensive manual balancing procedures and equipment. No need for oversized recirculation pumps which cause system wear and waste energy.

3) Proven technology

In thousands of installations in large commercial buildings including hotels, apartments, offices, condos, hospitals, schools and more.

4) Superior quality that lasts

Produced and backed by ThermOmegaTech®, founded in 1983. CircuitSolver® valves are 100% Stainless Steel and have a 3-year warranty.

5) Exceptional customer experience

Our experienced engineers are available to work with your team during your building's domestic hot water system design, installation and post-installation.

6) Made in the U.S.A.

CircuitSolver® is 100% made at our plant in Warminster, Pennsylvania.

7) The future of domestic hot water balancing is now with CircuitSolver®.

Put the latest technology in your building.

Discover how CircuitSolver® will make a significant difference in performance, savings and durability for your building's domestic hot water system. To learn more about CircuitSolver® and its application in your projects, please contact Lauren Berenato, Commercial Plumbing Channel Manager/Engineer, at CircuitSolver@ThermOmegaTech.com.
